### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

The terminal disclaimer has been recorded.

#### **EXAMINER'S AMENDMENT**

8. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR

1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

9. Authorization for this examiner's amendment was given in a telephone interview with Mr. Jarrett L. Silver (Reg. No. 60,239) on September 23, 2008.

10. The application has been amended as follows:

a. With regard to **Claims 19-21, 23 and 25-26**, the claims are authorized to be cancelled.

b. With regard to **Claim 27**, the claim is amended as following:

Claim 27: A computer readable medium encoded with computer executable instructions for determining an image marking process used to create a printed image, instructions, which when executed by a processor, cause the processor to perform operations comprising:

scanning the printed image;

determining spatial characteristics of the printed image;

analyzing the spatial characteristics of the printed image;

determining local spatial variations in the printed image based on the analyzed spatial characteristics; and

determining an analog tone or binary image marking process used to create the printed image based on the determined local spatial variations in the printed image;

wherein determining local spatial variations of the printed image includes determining local variations in input image, determining half tone dot periodicity, and

determining frequency or noise characteristics; and wherein determining the image marking process does not require obtaining additional spectral information obtained through additional spectral channels, and does not require a power spectrum of the image data.

c. With regard to **Claim 35**, the claim is amended as following:

Claim 35: An image marking process identification system for a printed image, comprising:

a memory; and

an image marking process identification determination circuit, routine or application that identifies at least one of a media type for the printed image or an image marking process used to process the printed image, by processing the printed image to determine spatial characteristics of the printed image; analyzing the spatial characteristics of the printed image; determining local spatial variations in the printed image based on the analyzed spatial characteristics; and determining an analog tone or binary image marking process used to create the printed image based on the determined local spatial variations in the printed image;

wherein determining local spatial variations of the printed image includes determining local variations in input data, determining half tone dot periodicity, and determining frequency or noise characteristics; and wherein determining the image marking process does not require obtaining additional spectral information obtained through additional spectral channels, and does not require a power spectrum of the image

data.

- d. With regard to **Claim 36**, the claim is amended as following:

Claim 36: The image marking process identification system according to claim 35, wherein local spatial variations include dispersion and periodicity.

- e. With regard to **Claim 37**, the claim is amended as following:

Claim 37: The image marking process identification system according to claim 35, wherein spatial characteristics include halftone dot periodicity, halftone screen frequency and halftone screen noise.

- f. With regard to **Claim 39**, the claim is amended as following:

Claim 39: The image marking process identification system according to claim 35, wherein the analyzing comprises determining one or more of an area average or mean of pixels in an image data block of the scanned printed image, an area variance of the pixels for the image data block, extreme minima value,  $\min_a$ , of the pixels for the image data block, extreme maxima value,  $\max_a$ , of the pixels for the image data block.

- g. With regard to **Claim 41**, the claim is amended as following:

Claim 41: The image marking process identification system according to claim 39, the analyzing further comprises one or more of: determining a ratio of

the area variance to mean determined for a given block, calculating a distribution of the mean values for large pixel areas, comparing the calculated mean value to the determined  $\min_a$  and/or  $\max_a$  values, and determining a distance between maxima/minima.

- h. With regard to **Claim 42**, the claim is amended as following:

Claim 42: The image marking process identification system according to claim 35, wherein determining an image marking process further comprises setting color attributes for storage, transmission, transformation or reproduction.

#### ***REASONS FOR ALLOWANCE***

11. The following is an examiner's statement of reasons for allowance:

The instant invention is generally relates to an invention relates to automatically identifying a marking process used to form an image on a substrate.

**With regard to Claim 1**, the closest prior arts of record, Sharma (U.S. Patent No. 6,353,675) and Wang (U.S. Patent No. 6,031,618), do not disclose or suggest, among the other limitations, the additional required limitation of *"wherein determining spatial variations of the printed image includes determining local variations in input data, determining half tone dot periodicity, and determining frequency or noise characteristics; and wherein determining the image marking process does not require obtaining additional spectral information obtained through additional spectral channels, and does not require a power spectrum of the image data"*.

These additional features in combination with all the other features required in the claimed invention are neither taught nor suggested by Sharma and Wang.

**With regard to Claims 2-12, 14, 16 and 18**, the claims are depending from the independent Claim 1, each encompasses the required limitations recited in the independent claim discussed above.

**With regard to Claim 27**, the closest prior arts of record, Sharma (U.S. Patent No. 6,353,675) and Wang (U.S. Patent No. 6,031,618), do not disclose or suggest, among the other limitations, the additional required limitation of “*wherein determining local spatial variations of the printed image includes determining local variations in input data, determining half tone dot periodicity, and determining frequency or noise characteristics; and wherein determining the image marking process does not require obtaining additional spectral information obtained through additional spectral channels, and does not require a power spectrum of the image data”.* These additional features in combination with all the other features required in the claimed invention are neither taught nor suggested by Sharma and Wang.

**With regard to Claims 28-29, 31 and 33-34**, the claims are depending from the independent Claim 27, each encompasses the required limitations recited in the independent claim discussed above.

**With regard to Claim 35**, the closest prior arts of record, Sharma (U.S. Patent No. 6,353,675) and Wang (U.S. Patent No. 6,031,618), do not disclose or suggest, among the other limitations, the additional required limitation of “*wherein determining local spatial variations of*

*the printed image includes determining local variations in input data, determining half tone dot periodicity, and determining frequency or noise characteristics; and wherein determining the image marking process does not require obtaining additional spectral information obtained through additional spectral channels, and does not require a power spectrum of the image data*".

These additional features in combination with all the other features required in the claimed invention are neither taught nor suggested by Sharma and Wang.

**With regard to Claims 36-37, 39 and 41-42**, the claims are depending from the independent Claim 35, each encompasses the required limitations recited in the independent claim discussed above.
